## **INTERNATIONAL SEARCH REPORT**

International application No.
PCT/US03/07713

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)			
This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:			
1. Claim Nos.: because they relate to subject matter not required to be searched by this Authority, namely:			
2. Claim Nos.:  because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:			
3. Claim Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).			
Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)			
This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet			
<ol> <li>As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.</li> <li>As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.</li> <li>As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:</li> </ol>			
4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:			
Remark on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.			

INTERNATIONAL SEARCH REPORT	PCT/US03/07713			
DOTAL ODGEDY A GYONG MINERAL PROPERTY OF THIS ENGINEER IN C.	A CYZINIC			
BOX II. OBSERVATIONS WHERE UNITY OF INVENTION IS I This application contains the following inventions or groups of inventions which concept under PCT Rule 13.1. In order for all inventions to be searched, the a	h are not so linked as to form a single general inventive			
Group I, claim(s) 1-17, drawn to a method for predicting clinical outcome for a patient diagnosed with cancer.				
Group II, claim(s) 18-24, drawn to a method of predicting the likelihood of the recurrence of cancer following treatment in a cancer patient.				
Group III, claim(s) 25-31, drawn to a method for classifying cancer.				
Group IV, claim(s) 32-40, drawn to a method for predicting the likelihood of long-term survival of a breast cancer patient, and an array for use therein.				
Group V, claim(s) 41 and 44, drawn to a method of predicting the likelihood of long-term survival of a patient diagnosed with invasive breast cancer, and an array for use therein.				
Group VI, claim(s) 42, 43, and 45, drawn to a method of predicting the likelihood of long-term survival of a patient diagnosed with estrogen receptor-positive invasive breast cancer, and an array for use therein.				
The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: each of the groups corresponds to a specific relationship between a specific type of cancer and a specific set of genes; thus, there is clearly no special technical feature in common.				
Continuation of B. FIELDS SEARCHED Item 3: USPAT, PGPUB, DERWENT, MEDLINE, BIOSIS				
search terms: cancer, tumor, prognosis, expression, p27, p53BP2, etc.
